

Meeting protocol for the sixth meeting - 6/10

Attendance:

Moderator: Philip Nord

Secretary: Kevin Brunström

Jakob Wall is excused.

All others attending.

Recap from the demo yesterday:

Kenneth could not attend so the short demo was presented to Håkan.

We demonstrated the tracking technology to him and he was pleased with the progress. When we explained the problems with installing the software on the MOPED he understood and suggested that we would look into server solution. The downside with that solution is that there will be a communication delay between server and MOPED. Besides that there was a problem with the UV-sensor and therefore other progress could not be demonstrated.

Finally Håkan explained once more that the main of the course was not all about actually achieving Kenneth's goals. He also said they did a bad assumption by not considering that there could arise problems with the hardware due to transportation.

Scrum of Scrums:

First of many groups are experiencing hardware problems and many of those groups had almost come to a standstill due to that they are not able to test scripts and code properly on the MOPED's. The meeting concluded that 7 out of 10 MOPED had problems and that 6 out of 10 did think that they would not be able to reach Kenneth's goals. Further on it was decided that individual groups could use whatever tracking technology they wanted.

Short summary of other topics and decisions:

- On Tuesday there will be an all day opportunity for hardware repair at Lindholmen.
- The maximum speed will be very very low.

- Everyone needs to be more active on Slack
 - When a group receives a battery this has to be reported in Slack.

Retrospective

See retrospective folder for summary and Trello.

KPI:

None of the groups were understaffed, one group felt a bit overstaffed.

Tasks	Value (cc)
Lowest	1,00
Mean value	3,13
Highest	8,00

The KPI measuring how our expectations are in regards to the PO's expectations are not measurable in this sprint.

Sprint 5

Final vision for the project is that the camera controls turning and ACC regulates speed.

Much needed testing to be done.

Unfinished user stories from last week will be moved to this Sprint. Their workload value (couscous) will also be adjusted.

User stories for this week: Camera, ACC, rapport, integration and Sprint 4 remainders.

Tasks

See trello for the tasks.

There is a new Trello board for the rapport, where each member of the group will be assigned two tasks. The goal is to have an draft by the end of the sprint.

Total Couscous for this sprint: 55cc

- Report: 25cc
- Other: 29cc

Actual couscous were 67cc at first, the attendees of the meeting decided to prioritize tasks and therefore ended up with 54cc.

New teams for Sprint 5

The teams for sprint 5 will be as follows:

User Story	Team
ACC	Jakob W, Fredrik, Alexandra
Camera	Simon, Philip, Kevin
Application	Sanjin, Joakim, Anne
Main	Svante, Anton, Jakob E

New Scrummaster

The new Scrummaster will be: Fredrik

Other

- Got a tip/demand from tech-support to flash the SCU, there is now an back-up.
- Compare D3 with an other group.
