

Retrospective Sprint 4

Scrummaster: Philip Nord

Team effort: 45/66

PROs:

- Communication with other groups has improved, especially with Moppepojkarna
- There is an overall positive feeling even though there has not been time to test all scripts.
- It has been easy to understand what the weekly goals were.
- Good working spirit
- The group tried to find other solutions when MOPED was not working.
-

CONs:

- The groups could not test the software
- The group should have talked more with other groups to require test data. Also there could have been more test written by the group.
- Software errors
- An overall need to communicate with other groups, especially when the hardware malfunctions.
- One of the groups had a miscommunication problem that led to unnecessary work.

Notes:

Add retrospectives to GIT.

Improvement areas: Communication within the group and with other groups needs to improve. If you are unsure - ask again until it is crystal clear so that unnecessary work does not arise. Try not to assume anything.
