# Meeting protocol fourth meeting - 22/9:

## Attendance:

Simon Kärrman is excused
All other attending

Secretary: Anne Keller
Moderator: Jakob Erlandsson

## Recap from the demo yesterday:

As per from the demo yesterday and feedback from Håkan we are in line with what should have produced by now. We are a bit behind with the tasks from this sprint but Håkans advice is that we should push them forward to the next sprint to make sure that we finalize them instead of making loads of new tasks.

## Scrum of Scrums:

People have been giving up on the servers and are now on the same track as us. One group has produced a script that makes them able to program in Java and are willing to share this script with us.

**Pros Java:**
We have more experience with Java

**Cons Java:**
We are forced to use the made up converting script
More code to understand

**Pros Python:**
Fun experience
Easy code for the camera

**Cons Python:**
Less experienced

We will discuss what's more suitable.

Other groups have had the idea to put a QR-code or an image on the MOPED to have all the MOPED:s in line.

There is a group working towards creating a shared server if that is of interest.

## Retrospective:

See retrospective folder and Trello.

## KPI:

Our mean value for the tasks appeared to be 3.5
The KPI measuring how our expectations are in regards to the PO's expectations are not measurable in this sprint

Some of the teams feel that we have been to many for the amount of work, others feel that they have been too few for the amount of work which might be due to issues during the sprint.

## Half-time evaluation:

Håkan wanted us to comment on our experience from the Lego-task in the first week, what did we learn from it? This needs to be included in our assignment.

## Sprint 3:

For sprint 3 we will have to finalize the unfinished tasks from from sprint 2.
The unfinished tasks consists of 34 cc in total and we will therefore add tasks that is equivalent to 16 cc. If we are done early in this sprint we will make sure to have a new meeting to fill up the rest of the time in the sprint with new tasks.

For this sprint we will keep the same teams as we did not finish all tasks and need to continue within the already existing teams.

The teams that finished their tasks in sprint 2 will focus on the report. All teams will take part and work on different parts in the report as we want to make sure it is a report written by the whole group and not by a few members of the group.

We all find the planning quite tricky and we find that it takes a lot of time.

## Tasks:

See trello for the tasks.

## New teams for Sprint 3:

The teams will be as in sprint 2.
We have four subteams:
- Simon, Anton, Jakob E
- Jakob W, Philip, Fredrik
- Alexandra, Sanjin, Svante
- Joakim, Kevin, Anne

## New Scrummaster:

The new Scrummaster will be Alexandra

## Other:

Jakob will have head-responsibility for report, but as earlier mentioned it is a team task
